Subject: field sampling for amms this fall in PH

Hi y'all:

This note is from Stan van de Wetering

Ron:

I went through the round 3 sampling plan this a.m. It basically looks good to me. I of course had some questions about defining the effort for the 30 sub-sites across each of the 20 sampling polygons but other than that it made sense to me.

I would like to get out for a day or two when Windward samples. I understand the timing issues and I will try to keep some freedom in my schedule. I have my own boat which can hold several people if there was a need - although I don't know if several people in one boat is a good idea for a whole day of sampling!

I have let Helle know of my interest. I have also offered up our underwater camera set ups as a means to potentially get some additional insight as to the issues surrounding the success or failure of the shocker equip at these particular sites. The set up is pretty simple and we could run it from my boat but it would take a little coordination time to set it up around the shocker unit.

Would you please pass this message on to Joe G (epa) so we can go from there - I have lost his address.

Thanks much,

Stan van
